Each is a victim of injustice. They were born with genetic malformations, attacked by flesh eating infections, or afflicted with deadly tumors. They face further injustice because they were born in developing nations that lack resources for basic health facilities and expert medical care. Finally, they suffer social ostracism manifested by parents, unable to provide necessary medical care, who often hide their children’s faces in shame.

In response to the need, the International College for Maxilla-Facial Surgery (ICMFS) chartered the International Foundation for Children with CranialFacial Disorders, to raise funds to:

- Refurbish dilapidated, abandoned operating facilities to enable more surgeries to be performed.
- Provide modern instruments, such as fiber-optic intubation systems to decrease unnecessary tracheotomies.
- Provide transportation for sick children, helping parents who would otherwise carry their sick or disfigured children in their arms or in wheelbarrows for hundreds of miles.
Like you, we are saddened by these deformed faces, but we look beyond their faces into their eyes. You can see their courage, perseverance, and a refusal to surrender to their diseases and deformities. Deep within the eyes of these children is our inspiration to raise money. We cannot correct all of nature’s mistakes nor eliminate society’s cruelty, but our Foundation is one step in the right direction.

We believe that our human spirit is fair, kind and seeks to eradicate injustice. Please, for a moment, bring these children into your life and consider making a gift.

The International College of Maxillo-Facial Surgeons, the sponsoring society, began in 1970 and has members in over fifty countries. With the help of our members and working with other organizations, such as People to People, Project Hope, and WHO, we identify and serve the neediest children.
